Acknowledgement of Country

UQ acknowledges the Traditional Owners and their custodianship of the lands on which we meet today. We pay our respects to their Ancestors and their descendants, who continue cultural and spiritual connections to Country. We recognise their valuable contributions to Australian and global society.

Today's plan

1. Arrange yourself into groups of approximately 6 (if you cannot find a group, please ask a facilitator)
 - You need ONE copy of the peer assessment rubric per group
2. Spend ~60 minutes working through the case and preparing a presentation that answers the key questions and your findings
 - The presentation should be 5-7 minutes in length
 - Each group member must present
3. Present to another group, then switch
 - Use the peer marking rubric to mark the group
 - Make sure all group members names are on the rubric
 - Hand into a facilitator for grade upload

Useful resources

- The Australian Medicines Handbook
- MIMS
- Therapeutic Guidelines

Search "**UQ Pharmacy Library**" into google for all of these in one place

The screenshot displays the UQ Pharmacy Library website. The header includes the University of Queensland logo and navigation links: Study, Research, Partners and community, and About. A search bar is located in the top right. Below the header, a breadcrumb trail reads: UQ home > Library > Guides > Subject > Pharmacy and phar... > Key resources. A banner below the breadcrumb states: "The Library is custodian of culturally sensitive Aboriginal and Torres Strait Islander materials." The main content area is titled "Pharmacy and pharmaceutical sciences" and describes it as a hub for key drug resources, evidence-based practice tools, databases, journals, and websites. On the left, a "Key resources" dropdown menu is open, showing options: Databases, Specialist drug resources (highlighted with a red box), and Reference. Below this menu are links to "Australian Indigenous health key resources", "Books and eBooks", "Journal articles and databases", and "Referencing and writing". On the right, the "Databases" section is titled, followed by a description: "Use these databases to find scholarly journal articles and clinical information". A list of databases follows: PubMed (Freely available health database), Embase (Biomedical and pharmacological bibliographic records from Embase and MEDLINE), CINAHL (Contains citations with abstracts to articles published in nursing and allied health literature), Scopus (A multidisciplinary abstract and citation database of peer reviewed literature, book reviews and conference proceedings), and International pharmaceutical abstracts.

Activity (60 minutes)

Please hand in your completed rubric

- Ensure that every student in your group is listed on the rubric

Thanks! Any Questions?
